SDC HACKATHON 2026 · DOMAIN 2 · ORBYTE SMART SME CHALLENGE

Customer chats into *reviewable* orders.

Yapoz helps Malaysian micro and small businesses turn customer conversations into structured orders that staff review and approve.

WORKING PROTOTYPE

SYNTHETIC DATA ONLY

TEAM YAPOZ

One message. *Six* manual steps.

> “Can I order two of these for tomorrow?”

CUSTOMER, IN CHAT

1. Identify the product
2. Check availability
3. Work out the price
4. Collect missing details
5. Record the order
6. Check the receipt that arrives later

Repeated for every order by owners and small teams who run daily work through chat, spreadsheets and notes.

Tools stop at *the front door*

39.7%

of GDP, from MSMEs

RM689.8 billion, 2025

48.7%

of employment

8.09 million people, 2025

THE GAP

Micro and small firms digitalise sales, marketing and payments first. Back-end processes lag, and tools are often used in isolation.

MSMEs include medium firms. Our first users are micro and small businesses.

Yapoz links the message to the work behind it.

Sources: DOSM, MSME Performance 2025 (released 30 Jul 2026). Khazanah Research Institute, “From Survival to Scale”, May 2026 (micro and small enterprises).

THE SOLUTION

One journey, *approved* by staff

1. **Chat request** — customer asks
2. **Business data** — catalogue, hours, policies
3. **AI and rules** — interpret, validate, price
4. **Staff approval** — owner or service role
5. **Logged outcome** — status, stock, log

THREE CAPABILITIES, ONE OUTCOME

Structure

A conversation becomes an order: items, quantities, customer, fulfilment.

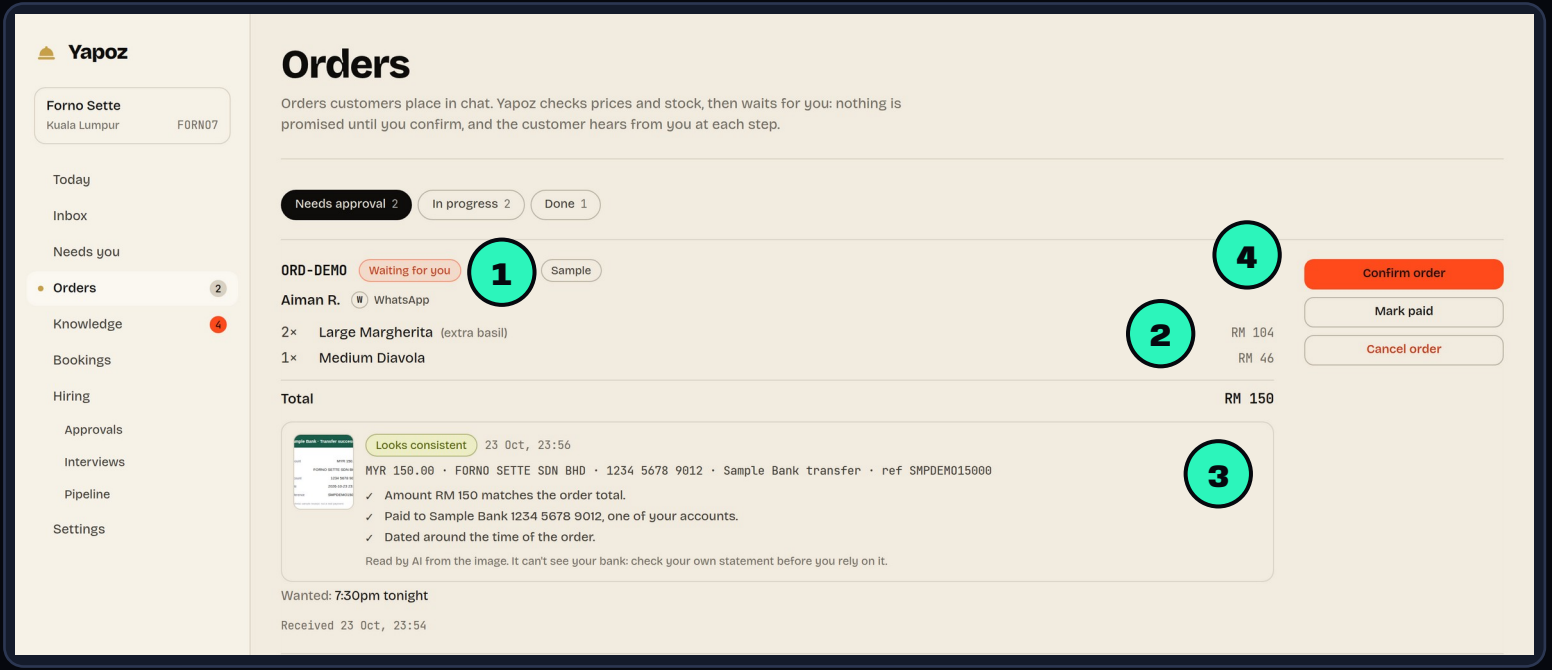

Ground

Replies use the catalogue and policies. Rules set the prices.

Review

Receipt checked against the order. Advice, not a verdict.

Chats and orders, *one place*

1 Pending
Nothing promised until staff confirm.

2 Catalogue prices
Set by the business, not the model.

3 Receipt review
Advice with reasons.

4 Staff action
Confirm, mark paid or cancel.

Each business sets its own catalogue, hours and policies.

Prototype screen with synthetic sample data (a made-up pizzeria).

PEOPLE STAY IN CONTROL

AI prepares. *Staff* confirm.

Pending — AI prepares it from the catalogue.

↓

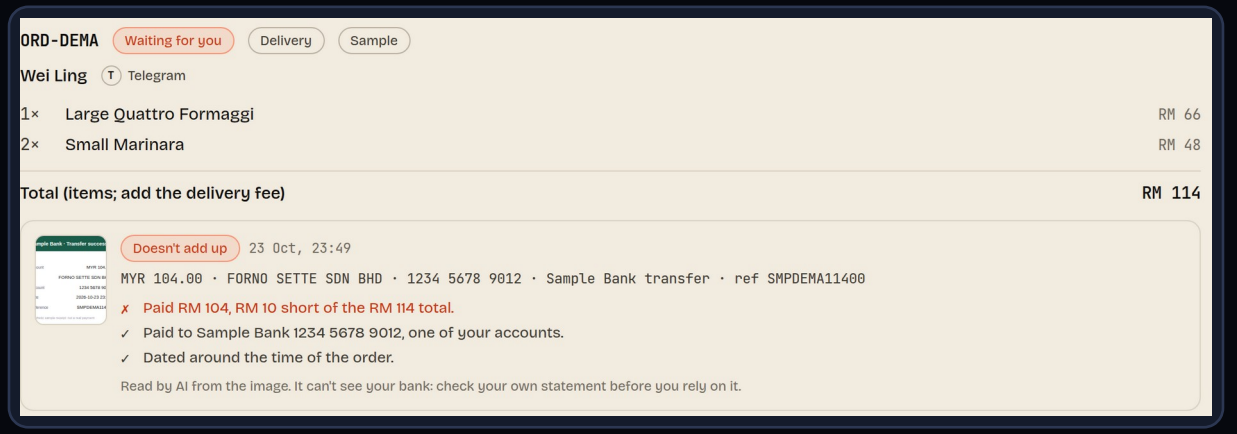

Review — Staff check it, with receipt advice.

↓

Confirmed — Stock rechecked, action logged.

CAN CONFIRM

OWNER · SERVICE STAFF

Advice only: it flags the RM 10 gap and cannot see the bank.

HARDEST RISK

A wrong AI reading of a request.

LIMITS AND FALLBACK

Catalogue checks, pending status, human review. Staff can take over.

A new module for Orbyte

BUILT: PROTOTYPE TODAY

1. Customer chat
2. Pending order
3. Staff approval
4. Activity record

workspace and roles

approved order events

PROPOSED INTEGRATION (NOT LIVE)

Orbyte business hub

- Workspace and roles
- Approvals and audit trail
- Notifications
- Open APIs

CONNECTED SERVICES (EXAMPLES)

- Inventory and POS
- Accounting, e-invoicing

No live Orbyte connection is claimed. Synthetic records only.

REUSE

Same flow, *new catalogue*

Bakery

Cakes and pastries in sizes, with pickup times.

Gift shop

Items with options and notes, pickup or delivery.

Retailer

Products by size and colour, with stock counts.

WHAT STAYS THE SAME

Request · Catalogue check · Pending order · Staff approval · Activity record

Illustrative examples. The prototype's own sample data is a pizzeria and a salon.

AI reads. *Rules decide.*

Customer chat

Connectors in the code: Telegram, WhatsApp, Instagram.

→

AI layer

Interprets the request, calls defined business tools.

→

Backend rules

Validate products, price from catalogue, check stock, enforce roles.

→

PostgreSQL

Orders, receipts, activity record.

`Next.js` `TypeScript` `PostgreSQL`

Interpretation by AI. Decisions by rules and people.

We used Replit Agent for our initial application structure and base code.

LIVE DEMONSTRATION

Follow *one order* end to end

1 **Request**
synthetic customer order

2 **Clarify**
catalogue price, missing details

3 **Pending**
structured order to review

4 **Receipt**
advisory check

5 **Approve**
authorised staff confirm

6 **Recorded**
status, log, notice

TEST WORKSPACE · SYNTHETIC DATA · NO REAL PAYMENTS

EXPECTED IMPACT

Less handling time, *measured*

PHASE 2 TARGET, NOT A RESULT

-30%

staff handling time per completed order

Same 20 synthetic order scenarios, handled manually and with Yapoz.

ALSO MEASURED

Order-field errors.

New users finishing unassisted.

SDG 8

8.2 Productivity through technological upgrading

8.3 Entrepreneurship and small-business growth

PROPOSED MODEL

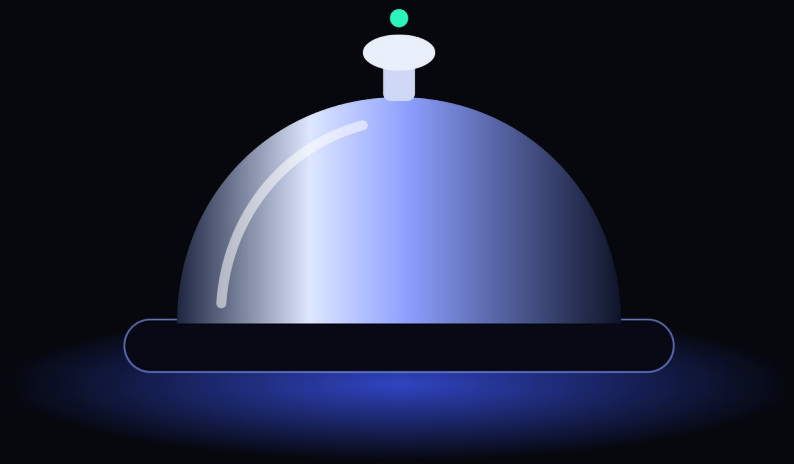

Free entry tier. Usage-based charges per completed workflow.

NEXT

Validate with SME owners. Test the Orbyte connection.

THANK YOU

Conversations in. *Reviewed* orders out.

Less repetitive administration, fewer avoidable mistakes, and people in control.
